vaibhavpurane95@gmail.com

SKILLS

- **Languages:** Java, SQL
- **Backend :** Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, JWT
- **Database:** MySQL

PROFESSIONAL EXPERIENCE

IOTAS, Software Engineer

Oct 2024 - Present

- Designed and developed 20+ RESTful APIs using Spring Boot, Spring MVC and Spring Data JPA reducing frontend integration effort by 25% through reusable API design.
- Implemented JWT-based authentication and role-based authorization using Spring Security, securing REST APIs and enabling centralized access control across backend services.
- Designed normalized PostgreSQL schemas and optimized SQL queries, reducing average API response time by 15–20% and improving database efficiency.
- Developed reusable service and repository components following layered architecture and SOLID principles, reducing duplicate business logic by approximately 10-15% and improving code maintainability across backend services.
- Integrated Swagger documentation, REST API testing and improving frontend-backend collaboration.

Team Vault, Trainee Engineer

April-2024 to Oct-2024

- Developed back-end modules using Spring Boot and MySQL, supporting feature delivery across multiple application modules with reusable service architecture.
- Designed and implemented RESTful APIs for frontend integration.
- Participated in Agile sprint planning, applications bug fixing, contributing to faster development.

PROJECT

Employee Management System (Microservices Architecture) -

Designed and developed a production-style Employee Management System using Spring Boot-based microservices, following Database-per-Service architecture for scalability and service isolation.

Technologies: Java, Spring Boot, Spring Security, Spring Data JPA, Apache Kafka, PostgreSQL, Docker.

Key Features:

- Designed and developed a microservices-based Employee Management System with services for Employee Management, Billing, Authentication, and Analytics, enabling independent deployment and service scalability.
- Secured REST APIs using JWT authentication and role-based authorization, enabling secure access across all microservices.
- Developed REST APIs supporting CRUD operations, request validation, pagination, exception handling and standardized HTTP responses.
- Integrated Apache Kafka for asynchronous communication, reducing inter-service dependency.
- Managed database schema in PostgreSQL.
- Containerized all microservices using Docker and deployed on AWS, simplifying deployments and reducing environment setup time by 70%.
- Implemented centralized exception handling and Bean Validation, reducing invalid API requests and improving API reliability.

EDUCATION

- **BACHELOR OF ENGINEERING (B.E)** Major in IT
Savitribai Phule Pune University | 2019 – 2023
