

HTTP

- HTTP (**HyperText Transfer Protocol**) is a **communication protocol**
- Used for **data exchange** between **client** (browser/app) and **server**
- Works on a **request-response** model

Most Important Request Headers

🌐 Host

→ Target domain

Host: api.example.com

🔑 Authorization

→ Auth token (JWT / Bearer)

Authorization: Bearer eyJhbGciOiJIIVNi1

📄 Content-Type

→ Format of request body

Content-Type: application/json

👉 Accept

→ Expected response format

Accept: application/json

🍪 Cookie

→ Sends stored session data

Cookie: sessionId=abc123

Most Important Response Headers

📄 Content-Type

→ Format of returned data

Content-Type: application/json

📏 Content-Length

→ Size of response

Content-Length: 512

🕒 Cache-Control

→ Caching rules

Cache-Control: max-age=3600

🍪 Set-Cookie

→ Stores session in browser

Set-Cookie: sessionId=abc123; HttpOnly; Secure

📍 Location

→ Location: **https:// example.com/**dashboard

Access-Control-Allow-Origin: *

Common values:

application/json

application/xml

multipart/form-data

text/plain

HTTP Request

🔍 METHOD & URL

GET /users/123 HTTP/1.1

📄 HEADERS

Host: api.example.com

Authorization: Bearer token123

Content-Type: application/json

📄 BODY

```
{ "name": "Ayushi",  
  "role": "admin" }
```

HTTP Response

✅ STATUS

200 OK

📄 HEADERS

• **Content-Type:** application/json

• **Content-Length:** 245

• **Cache-Control:** max-age=3600

📄 BODY

```
{ "id": 123,  
  "name": "Ayushi",  
  "followers": 94400 }
```

HTTP methods

GET - fetch

POST - create

PUT/PATCH - update

DELETE - remove

Common Status Codes

200 → Success

201 → Created

400 → Bad request

401 → Unauthorized

404 → Not found

500 → Server error
